

Avian/Wildlife Protection Sidebreak Switch

Features:

- Reduces Wildlife Caused Outages
- Provides Clear View of Switch Contacts and Interrupters
- Available with Hookstick, Manual or Automatic Controls
- Environmentally Conscious - Protects Wildlife
- Customizable for Specific Construction Needs
- Tested to Meet California Dept. of Forestry and Fire Protection (CDF) Exemption Requirements
- Meets or Exceeds ANSI, IEEE, and IEC standards

*Underarm Switch
with Reciprocating control*

INERTIA's Avian Protection Sidebreak Switches mitigates the hazard of wildlife related flashovers while maintaining the robust quality of the **LineBOSS™** design.

*Underarm Switch
with Hookstick control*

The Avian Protection configuration features an Underarm mounted switch to prevent danger to wildlife without the costly and excessive use of insulated guards. Avian switches are available in Distribution & Transmission voltage class switchgear and are customizable per your construction needs.

 **ArmorGalv®** coated ferrous components available for increased corrosion resistance.
